pro-grade modelwork

We take great pride in our modelwork taking every precaution to insure your restorations fit and function properly. We begin by using a computerized dispenser to control setting expansion by accurately measuring the powder/liquid mixing ratio of dental stone. We use both the AmmanGirrbach Giroform and ArtiMax model systems to eliminate distortions stemming from base stone expansion. In addition, all cases involving 3 units or more are custom mounted on Ivoclar's Stratos 200 Articulators, and all bridges are fabricated using solid models to eliminate distortions due to pinning and sectioning. Lastly, all dies are trimmed under 20x magnification. And, we accept digital impressions from Lava COS, Cadent iTero and Cerec Connect!
